

# Finding maximal Cohen Macaulay and reflexive modules

Prashanth Sridhar

University of Kansas

February 2, 2021

- ▶ Motivation for this study.
- ▶ Some questions on existence of maximal Cohen Macaulay modules in mixed characteristic.
- ▶ Reflexivity in dimension one over non Gorenstein rings.

### Definition 1

Let  $(R, \mathfrak{m})$  be a local ring of dimension  $d$ . A non zero  $R$ -module  $M$  is a **maximal Cohen Macaulay module (small Cohen Macaulay module)** if it is finitely generated and every (equivalently some) system of parameters of  $R$  is a regular sequence on  $M$ .

### Definition 2

Let  $R$  be a Noetherian ring and  $M$  a non zero  $R$ -module. Then  $M$  is reflexive if the natural map  $M \rightarrow M^{**}$  is an isomorphism, where  $M^* = \text{Hom}_R(M, R)$ .

### Definition 1

Let  $(R, \mathfrak{m})$  be a local ring of dimension  $d$ . A non zero  $R$ -module  $M$  is a **maximal Cohen Macaulay module (small Cohen Macaulay module)** if it is finitely generated and every (equivalently some) system of parameters of  $R$  is a regular sequence on  $M$ .

### Definition 2

Let  $R$  be a Noetherian ring and  $M$  a non zero  $R$ -module. Then  $M$  is reflexive if the natural map  $M \rightarrow M^{**}$  is an isomorphism, where  $M^* = \text{Hom}_R(M, R)$ .

## How are they related ?

- ▶ Over Cohen Macaulay rings of  $\dim \leq 2$ , Reflexive  $\implies$  MCM.
- ▶ Arbitrary dimension, normal or Gorenstein:  
MCM  $\implies$  Reflexive.

They are certainly not the same:

- ▶ For a one-dim Cohen Macaulay local ring with a canonical module  $\omega$ , the ring is Gorenstein if and only if  $\omega$  is reflexive.
- ▶ Any non Cohen Macaulay ring is a reflexive module over itself.

## How are they related ?

- ▶ Properties of these objects have been studied extensively.
- ▶ However their existence and/ or their ubiquity (or lack of) is far from clear.
- ▶ If they exist, are there "finitely" many of them in some sense?  
How to construct them?

**Conjecture 1** [Hochster] Every complete local domain admits a maximal (small) Cohen Macaulay module.

- ▶ Clearly true if  $\dim(R) \leq 2$ .
- ▶ There are examples of non catenary rings that do not admit a MCM module.
- ▶ (M.J. Bertin) Example of non CM UFDs that do not admit a MCM module of rank one.
- ▶ Conjecture 1 implies many other homological conjectures (most of which are now theorems) and in particular the positivity of Serre's intersection multiplicity conjecture.

- ① Conjecture 1 is known to be true only in very few cases.

Theorem 3 (Hartshorne, Hochster, Peskine-Szpiro)

*Any three-dimensional  $\mathbb{N}$ -graded domain of characteristic  $p > 0$  admits a maximal Cohen Macaulay module.*

Theorem 4 (Schoutens)

*Any three-dimensional pseudo-graded local ring of characteristic  $p > 0$  admits a maximal Cohen Macaulay module.*

- ② There are some other results over dimension three local rings of characteristic  $p > 0$  due to Hanes and Schoutens.

- ① Conjecture 1 is known to be true only in very few cases.

### Theorem 3 (Hartshorne, Hochster, Peskine-Szpiro)

- ▶ Conjecture 1 reduces to the integral closure of a complete regular local ring in a finite Galois extension of its fraction field.

### Theorem 5 (Roberts)

*Let  $S$  be a regular local ring,  $L$  its quotient field, and  $K$  be a finite Abelian extension of  $L$  with Galois group  $G$ . Assume that the order of  $G$  is not divisible by the characteristic of the residue field of  $S$ . Then the integral closure of  $S$  in  $K$  is Cohen Macaulay.*

- ▶ Applies to the equi-characteristic zero case.

- ▶ Conjecture 1 reduces to the integral closure of a complete regular local ring in a finite Galois extension of its fraction field.

### Theorem 5 (Roberts)

*Let  $S$  be a regular local ring,  $L$  its quotient field, and  $K$  be a finite Abelian extension of  $L$  with Galois group  $G$ . Assume that the order of  $G$  is not divisible by the characteristic of the residue field of  $S$ . Then the integral closure of  $S$  in  $K$  is Cohen Macaulay.*

- ▶ Applies to the equi-characteristic zero case.

- ▶ Conjecture 1 reduces to the integral closure of a complete regular local ring in a finite Galois extension of its fraction field.

### Theorem 5 (Roberts)

*Let  $S$  be a regular local ring,  $L$  its quotient field, and  $K$  be a finite Abelian extension of  $L$  with Galois group  $G$ . Assume that the order of  $G$  is not divisible by the characteristic of the residue field of  $S$ . Then the integral closure of  $S$  in  $K$  is Cohen Macaulay.*

- ▶ Applies to the equi-characteristic zero case.

- ▶ The "modular case": that is when the degree of the extension is divisible by the characteristic of the residue field, the conclusion fails. (more on this later)
- ▶ Roberts's argument hinges on a nice decomposition of the group algebra  $k[G]$  (Maschke's Theorem).
- ▶ On the other hand if  $K/L$  is a cyclic extension of degree  $p$  and  $\text{char}(k) = p$ ,

$$k[G] = k[X]/(X - a)^p$$

- ▶ The "modular case": that is when the degree of the extension is divisible by the characteristic of the residue field, the conclusion fails. (more on this later)
- ▶ Roberts's argument hinges on a nice decomposition of the group algebra  $k[G]$  (Maschke's Theorem).

$\{\text{Possible representations of } G\} \longleftrightarrow \{\text{Depth, } S_n \text{ bounds for } R\}?$

- ▶ Extensions of the fraction field of an unramified regular local ring  $S$  with the property that the integral closure of  $S$  in such an extension is  $S$ -free if  $S$  contains a field but not necessarily so in the mixed characteristic scenario.
- ▶ Towards a mixed characteristic analog of Roberts's theorem: obstructions one faces when  $p$  divides the degree of the extension, with a two fold objective:
  - ① Determining when the integral closure is Cohen Macaulay + bounds on the depth.
  - ② When it is not Cohen Macaulay, determining whether it admits a maximal Cohen Macaulay module.

## Question 6

*Does the integral closure of a regular local ring of mixed characteristic  $p > 0$  in a finite Abelian extension of its fraction field admit a maximal Cohen Macaulay module?*

## Theorem 7 (Katz)

*Let  $S$  be an unramified regular local ring of mixed characteristic  $p > 0$  with field of fractions  $L$ . Let  $K := L(\omega)$  where  $\omega$  is the  $p$ -th root of an arbitrary element of  $S$ . Let  $R$  be the integral closure of  $S$  in  $K$ . Then  $R$  admits a birational maximal Cohen Macaulay module.*

### Question 6

*Does the integral closure of a regular local ring of mixed characteristic  $p > 0$  in a finite Abelian extension of its fraction field admit a maximal Cohen Macaulay module?*

### Theorem 7 (Katz)

*Let  $S$  be an unramified regular local ring of mixed characteristic  $p > 0$  with field of fractions  $L$ . Let  $K := L(\omega)$  where  $\omega$  is the  $p$ -th root of an arbitrary element of  $S$ . Let  $R$  be the integral closure of  $S$  in  $K$ . Then  $R$  admits a birational maximal Cohen Macaulay module.*

- ▶ Square free towers: "complexity" increases very fast.
- ▶ Intuition derived from a careful study of biradical extensions of an unramified regular local ring  $S$  of mixed characteristic  $p > 0$  obtained by adjoining  $p$ -th roots of sufficiently general square free elements say  $f, g \in S$ .
- ▶ May think of it as the case where the Galois group is  $\mathbb{Z}_p \times \mathbb{Z}_p$ .

- ▶ Square free towers: "complexity" increases very fast.
- ▶ Intuition derived from a careful study of biradical extensions of an unramified regular local ring  $S$  of mixed characteristic  $p > 0$  obtained by adjoining  $p$ -th roots of sufficiently general square free elements say  $f, g \in S$ .

## Theorem 11 (Sridhar)

*Let  $S$  be an unramified regular local ring of mixed characteristic  $p$ . Assume that  $S[\omega]$  and  $S[\mu]$  are normal rings. If  $fg^k \notin S^{p \wedge p^2}$  for  $1 \leq k \leq p-1$  then  $R$  is CM.*

*Further, in this case  $P^{(p-1)}$  is the conductor of  $R$  to  $A$  where  $P$  is the unique height one prime in  $A$  containing  $p$  and  $P^{(p-1)}$  denotes the  $(p-1)$ -th symbolic power of  $P$ .*

- ① The condition that  $fg^k \notin S^{p \wedge p^2}$  is saying that the ring

$$S[\omega\mu^k, \dots, \omega^i \mu^{ki \pmod{p}}, \dots, \omega^{p-1} \mu^{k(p-1) \pmod{p}}]$$

is normal. For example, if  $p = 2$ :  $S[\omega\mu]$  is normal. If  $p = 3$ :  $S[\omega\mu]$  and  $S[\omega\mu^2, \omega^2\mu]$  are normal.

- ② The powers of the prime  $P \subseteq A$  are not  $P$ -primary in general. However the  $(p - 1)$ -th symbolic power of  $P$  is Cohen Macaulay and  $P^{(p-1)} = (p, P^{p-1})$ .

- ① The condition that  $fg^k \notin S^{p \wedge p^2}$  is saying that the ring

$$S[\omega\mu^k, \dots, \omega^i \mu^{ki \pmod{p}}, \dots, \omega^{p-1} \mu^{k(p-1) \pmod{p}}]$$

is normal. For example, if  $p = 2$ :  $S[\omega\mu]$  is normal. If  $p = 3$ :  $S[\omega\mu]$  and  $S[\omega\mu^2, \omega^2\mu]$  are normal.

- ② The powers of the prime  $P \subseteq A$  are not  $P$ -primary in general. However the  $(p - 1)$ -th symbolic power of  $P$  is Cohen Macaulay and  $P^{(p-1)} = (p, P^{p-1})$ .

- ▶ In mixed characteristic two, results are a little sharper since in this case such extensions are automatically Abelian.
- ▶ For odd primes  $p$ , primitive  $p$ -th root of unity in  $S$  ramifies  $p$ .

### Proposition 12 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic two. Let  $S[\omega], S[\mu]$  be integrally closed rings and  $f, g \in S^{2 \wedge 4}$ .

- 1 If  $f, g \in \mathfrak{m}$ ,  $R \simeq S^2 \oplus_S \text{Syz}_S^2(S/Q)$  where  $Q := (2, h_1, h_2) \subset S$  and hence  $\text{p.d.}_S(R) \leq 1$ .
- 2 If  $f$  or  $g$  is a unit,  $R$  is Cohen Macaulay.
- 3 Thus  $R$  is Cohen Macaulay if and only if  $Q \subset S$  is a grade two perfect ideal.

## Non Cohen Macaulay cases

- ▶ In mixed characteristic two, results are a little sharper since in this case such extensions are automatically Abelian.
- ▶ For odd primes  $p$ , primitive  $p$ -th root of unity in  $S$  ramifies  $p$ .

### Proposition 12 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic two. Let  $S[\omega], S[\mu]$  be integrally closed rings and  $fg \in S^{2^4}$ .

- 1 If  $f, g \in \mathfrak{m}$ ,  $R \simeq S^2 \oplus_S \text{Syz}_S^2(S/Q)$  where  $Q := (2, h_1, h_2) \subset S$  and hence  $\text{p.d.}_S(R) \leq 1$ .
- 2 If  $f$  or  $g$  is a unit,  $R$  is Cohen Macaulay.

### Corollary 14 (Katz, Sridhar)

*Let  $S$  be a complete unramified regular local ring of mixed characteristic 2 and dimension  $d \geq 3$ . Assume that the residue field is perfect. Let  $f, g \in S$  square free and relatively prime. Then  $R$  admits a maximal Cohen Macaulay module.*

## Theorem 15 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic  $p \geq 3$  and dimension  $d \geq 3$ . Then

- 1  $R$  is Cohen Macaulay if
  - ▶ At least one of  $S[\omega], S[\mu]$  is not integrally closed.
  - ▶  $S[\omega], S[\mu]$  are integrally closed and  $fg^i \notin S^{p \wedge p^2}$  for all  $1 \leq i \leq p - 1$ .
- 2 Let  $S[\omega], S[\mu]$  be integrally closed such that  $fg \in S^{p \wedge p^2}$  and  $f, g \in \mathfrak{m}$ . Then  $R$  is Cohen Macaulay if and only if  $Q := (p, h_1, h_2) \subset S$  is a grade two perfect ideal. Moreover,  $p \cdot d_S(R) \leq 1$  and  $\nu_S(R) \leq p^2 + 1$ . If  $f$  or  $g$  is a unit, then  $R$  is Cohen Macaulay.
- 3 If  $R$  is not Cohen Macaulay and  $Q$  has grade three,  $R$  admits a birational maximal Cohen Macaulay module.

## Theorem 15 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic  $p \geq 3$  and dimension  $d \geq 3$ . Then

- 1  $R$  is Cohen Macaulay if
  - ▶ At least one of  $S[\omega], S[\mu]$  is not integrally closed.
  - ▶  $S[\omega], S[\mu]$  are integrally closed and  $fg^i \notin S^{p \wedge p^2}$  for all  $1 \leq i \leq p - 1$ .
- 2 Let  $S[\omega], S[\mu]$  be integrally closed such that  $fg \in S^{p \wedge p^2}$  and  $f, g \in \mathfrak{m}$ . Then  $R$  is Cohen Macaulay if and only if  $Q := (p, h_1, h_2) \subset S$  is a grade two perfect ideal. Moreover,  $p \cdot d_S(R) \leq 1$  and  $\nu_S(R) \leq p^2 + 1$ . If  $f$  or  $g$  is a unit, then  $R$  is Cohen Macaulay.
- 3 If  $R$  is not Cohen Macaulay and  $Q$  has grade three,  $R$  admits a birational maximal Cohen Macaulay module.

## Theorem 15 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic  $p \geq 3$  and dimension  $d \geq 3$ . Then

- 1  $R$  is Cohen Macaulay if
  - ▶ At least one of  $S[\omega], S[\mu]$  is not integrally closed.
  - ▶  $S[\omega], S[\mu]$  are integrally closed and  $fg^i \notin S^{p \wedge p^2}$  for all  $1 \leq i \leq p - 1$ .
- 2 Let  $S[\omega], S[\mu]$  be integrally closed such that  $fg \in S^{p \wedge p^2}$  and  $f, g \in \mathfrak{m}$ . Then  $R$  is Cohen Macaulay if and only if  $Q := (p, h_1, h_2) \subset S$  is a grade two perfect ideal. Moreover,  $p \cdot d_S(R) \leq 1$  and  $\nu_S(R) \leq p^2 + 1$ . If  $f$  or  $g$  is a unit, then  $R$  is Cohen Macaulay.
- 3 If  $R$  is not Cohen Macaulay and  $Q$  has grade three,  $R$  admits a birational maximal Cohen Macaulay module.

## Theorem 15 (Sridhar)

Let  $(S, \mathfrak{m})$  be an unramified regular local ring of mixed characteristic  $p \geq 3$  and dimension  $d \geq 3$ . Then

- 1  $R$  is Cohen Macaulay if
  - ▶ At least one of  $S[\omega], S[\mu]$  is not integrally closed.
  - ▶  $S[\omega], S[\mu]$  are integrally closed and  $fg^i \notin S^{p \wedge p^2}$  for all  $1 \leq i \leq p - 1$ .
- 2 Let  $S[\omega], S[\mu]$  be integrally closed such that  $fg \in S^{p \wedge p^2}$  and  $f, g \in \mathfrak{m}$ . Then  $R$  is Cohen Macaulay if and only if  $Q := (p, h_1, h_2) \subset S$  is a grade two perfect ideal. Moreover,  $p \cdot d_S(R) \leq 1$  and  $\nu_S(R) \leq p^2 + 1$ . If  $f$  or  $g$  is a unit, then  $R$  is Cohen Macaulay.
- 3 If  $R$  is not Cohen Macaulay and  $Q$  has grade three,  $R$  admits a birational maximal Cohen Macaulay module.

- ▶ It appears  $R$  is not "too far" from being Cohen Macaulay, in the sense that  $\text{depth}(R) \geq d - 1$  and it can be generated by  $\text{rank}_S(R) + 1$  elements over the base ring  $S$ .
- ▶ However if  $\dim(S) \geq 3$ , it could be that  $R$  does not even satisfy Serre's condition  $S_3$ . Therefore there is no non trivial "lower bound" on  $n$ , where  $R$  satisfies  $S_n$ .

- ▶ It appears  $R$  is not "too far" from being Cohen Macaulay, in the sense that  $\text{depth}(R) \geq d - 1$  and it can be generated by  $\text{rank}_S(R) + 1$  elements over the base ring  $S$ .
- ▶ However if  $\dim(S) \geq 3$ , it could be that  $R$  does not even satisfy Serre's condition  $S_3$ . Therefore there is no non trivial "lower bound" on  $n$ , where  $R$  satisfies  $S_n$ .

- ▶ Studying the structure of the conductor  $J$  of the integral closure  $R$  to  $A$ .
- ▶ Since  $A$  is Gorenstein and  $J$  is unmixed,  $R$  is Cohen Macaulay if and only if  $A/J$  is Cohen Macaulay.
- ▶ To show that  $R$  admits a birational maximal Cohen Macaulay module we choose a suitable ideal  $I \subseteq A$  such that  $I^*$  is a  $J^*$ -module and  $\text{depth}_S(I^*) = d$ .

## Examples

- ▶ We can generate examples of non Cohen Macaulay  $R$  relatively easily.
- ▶ Let  $S = \mathbb{Z}[X, Y]_{(p, X, Y)}$  for some prime number  $p \geq 3$ . Set

$$f = (X^2)^p + p(p - X^{2p})$$

$$g = (XY)^p + p(p + (XY)^p)$$

- ▶ Note that  $f, g \in S^p$  with  $h_1 = X^2$ ,  $h_2 = XY$ . Moreover  $f, g$  are square free and relatively prime in  $S$ .
- ▶ This gives rise to an example where  $Q := (p, h_1, h_2)$  has grade two but  $p.d_S(S/Q) = 3$  and hence  $R$  is not Cohen Macaulay.
- ▶ However  $R$  admits a MCM module.

- ▶ We can generate examples of non Cohen Macaulay  $R$  relatively easily.
- ▶ Let  $S = \mathbb{Z}[X, Y]_{(p, X, Y)}$  for some prime number  $p \geq 3$ . Set

$$f = (X^2)^p + p(p - X^{2p})$$

$$g = (XY)^p + p(p + (XY)^p)$$

- ▶ Note that  $f, g \in S^p$  with  $h_1 = X^2$ ,  $h_2 = XY$ . Moreover  $f, g$  are square free and relatively prime in  $S$ .
- ▶ This gives rise to an example where  $Q := (p, h_1, h_2)$  has grade two but  $p.d_S(S/Q) = 3$  and hence  $R$  is not Cohen Macaulay.
- ▶ However  $R$  admits a MCM module.

## Examples

- ▶ We can generate examples of non Cohen Macaulay  $R$  relatively easily.
- ▶ Let  $S = \mathbb{Z}[X, Y]_{(p, X, Y)}$  for some prime number  $p \geq 3$ . Set

$$f = (X^2)^p + p(p - X^{2p})$$

$$g = (XY)^p + p(p + (XY)^p)$$

- ▶ Note that  $f, g \in S^p$  with  $h_1 = X^2$ ,  $h_2 = XY$ . Moreover  $f, g$  are square free and relatively prime in  $S$ .
- ▶ This gives rise to an example where  $Q := (p, h_1, h_2)$  has grade two but  $p.d_S(S/Q) = 3$  and hence  $R$  is not Cohen Macaulay.
- ▶ However  $R$  admits a MCM module.

- ▶ We can generate examples of non Cohen Macaulay  $R$  relatively easily.
- ▶ Let  $S = \mathbb{Z}[X, Y]_{(p, X, Y)}$  for some prime number  $p \geq 3$ . Set

$$f = (X^2)^p + p(p - X^{2p})$$

$$g = (XY)^p + p(p + (XY)^p)$$

- ▶ Note that  $f, g \in S^p$  with  $h_1 = X^2$ ,  $h_2 = XY$ . Moreover  $f, g$  are square free and relatively prime in  $S$ .
- ▶ This gives rise to an example where  $Q := (p, h_1, h_2)$  has grade two but  $p.d_S(S/Q) = 3$  and hence  $R$  is not Cohen Macaulay.
- ▶ However  $R$  admits a MCM module.

- ▶ When  $f, g \notin S^p$ ,  $R$  is not necessarily CM.
- ▶ As an example, take  $S := \mathbb{Z}[X, Y, V]_{(2, X, Y, V)}$  and  $f = XV^2 + 4$ ,  $g = XY^2 + 4$ . Then  $f, g$  are square free, form a regular sequence in  $S$  and do not lie in  $S^2$ .
- ▶ Then it can be shown that  $R$  is CM if and only if

$$\frac{(\mathbb{Z}/2\mathbb{Z})[X, Y, V, W, U]_{(X, Y, V, W, U)}}{(W^2 - XV^2, U^2 - XY^2, UV - WY, WU - XYV)}$$

is CM and that the latter is not CM.

- ▶ However, the integral closure of  $R[\sqrt{X}]$  is a small Cohen Macaulay algebra for  $R$ .

- ▶ When  $f, g \notin S^p$ ,  $R$  is not necessarily CM.
- ▶ As an example, take  $S := \mathbb{Z}[X, Y, V]_{(2, X, Y, V)}$  and  $f = XV^2 + 4$ ,  $g = XY^2 + 4$ . Then  $f, g$  are square free, form a regular sequence in  $S$  and do not lie in  $S^2$ .
- ▶ Then it can be shown that  $R$  is CM if and only if

$$\frac{(\mathbb{Z}/2\mathbb{Z})[X, Y, V, W, U]_{(X, Y, V, W, U)}}{(W^2 - XV^2, U^2 - XY^2, UV - WY, WU - XYV)}$$

is CM and that the latter is not CM.

- ▶ However, the integral closure of  $R[\sqrt{X}]$  is a small Cohen Macaulay algebra for  $R$ .

- ▶ When  $f, g \notin S^p$ ,  $R$  is not necessarily CM.

## Theorem 16 (Katz, Sridhar)

*Let  $S$  be an unramified regular local ring of mixed characteristic  $p > 0$  with fraction field  $L$ . Let  $f_1, \dots, f_n \in S^{p \wedge p^2}$ , square free and mutually coprime. Let  $\omega_i^{n_i} = f_i$  such that  $p \mid n_i$  and  $p^2 \nmid n_i$  for each  $i$ . If  $f_i = p$ , then assume  $n_i = p$ . Then the integral closure of  $S$  in  $L(\omega_1, \dots, \omega_n)$  is Cohen Macaulay.*

- ▶ The above result enables the existence of small CM algebras for a broad class of non CM rings.
- ▶ One approach when  $S$  is complete with perfect residue field is to "reduce to  $S^p$ " and then ramify  $p$  suitably to expect behaviour similar to Theorem 16.

## Theorem 16 (Katz, Sridhar)

## Theorem 20 (Dao, Maitra, Sridhar)

Suppose that  $R$  is a one-dimensional Cohen-Macaulay local ring with a canonical ideal  $\omega_R$ . Let  $S$  be a finite extension of  $R$ . The following are equivalent (for the last implication, assume that  $S$  is a birational extension and the residue field of  $R$  is infinite):

- 1 Any maximal Cohen-Macaulay  $S$ -module is  $R$ -reflexive.
- 2  $\omega_S$  is  $R$ -reflexive.
- 3  $\text{Hom}_R(S, R) \cong \text{Hom}_R(S, \omega_R)$ .
- 4  $S$  is  $\omega_R$ -Ulrich as an  $R$ -module.
- 5  $S$  is  $R$ -reflexive and the conductor of  $S$  to  $R$  lies inside  $\text{core}(\omega_R) :_R \omega_R$ .

## Theorem 20 (Dao, Maitra, Sridhar)

A class of objects is said to have **finite type** if there are only finitely many indecomposable objects up to isomorphism.

Theorem 24 (Dao, Maitra, Sridhar)

*Let  $R$  be a one dimensional Cohen Macaulay local ring with infinite residue field. Then any reflexive regular ideal of  $R$  is isomorphic to an ideal containing the conductor  $c$ .*

A class of objects is said to have **finite type** if there are only finitely many indecomposable objects up to isomorphism.

Theorem 24 (Dao, Maitra, Sridhar)

*Let  $R$  be a one dimensional Cohen Macaulay local ring with infinite residue field. Then any reflexive regular ideal of  $R$  is isomorphic to an ideal containing the conductor  $c$ .*

### Theorem 25 (Dao, Maitra, Sridhar)

Let  $R$  be a one dimensional analytically unramified Cohen Macaulay local ring and  $\mathfrak{c}$  its conductor ideal. Further assume that  $k$  is infinite or  $|\text{Min}(\hat{R})| \leq |k|$ . Consider the following.

- 1  $\ell(R/\mathfrak{c}) \leq 3$
- 2  $\ell(R/\mathfrak{c}) = 4$  and  $R$  has minimal multiplicity.

Then in all the above cases,  $\text{Ref}_1(R)$  is of finite type.

- ▶ The above theorem is sharp:  $R = k[[t^4, t^5, t^6]]$  is a complete intersection domain of multiplicity 4 (not minimal multiplicity),  $\ell(R/\mathfrak{c}) = 4$  but  $\text{Ref}_1(R)$  is not of finite type.

Theorem 26 (Dao, Maitra, Sridhar)

*Assume that  $(R, \mathfrak{m})$  is a one dimensional, reduced complete local ring and the conductor  $\mathfrak{c}$  of  $R$  is equal to  $\mathfrak{m}$ . Then  $\text{Ref}(R)$  is of finite type.*

- ▶ The above theorem is sharp:  $R = k[[t^4, t^5, t^6]]$  is a complete intersection domain of multiplicity 4 (not minimal multiplicity),  $\ell(R/\mathfrak{c}) = 4$  but  $\text{Ref}_1(R)$  is not of finite type.

### Theorem 26 (Dao, Maitra, Sridhar)

*Assume that  $(R, \mathfrak{m})$  is a one dimensional, reduced complete local ring and the conductor  $\mathfrak{c}$  of  $R$  is equal to  $\mathfrak{m}$ . Then  $\text{Ref}(R)$  is of finite type.*

- ▶ More results in the case of **Almost Gorenstein rings** ( $\mathfrak{m}$  is  $\omega_R$ -Ulrich). For example in such rings all powers of trace ideals are reflexive.

### Definition 27

The *trace ideal* of an  $R$ -module  $M$  (denoted  $tr(M)$ ) is the image of the natural map  $\tau_M : M^* \otimes_R M \rightarrow R$ . An ideal  $I \subseteq R$  is a trace ideal if  $I = tr(I)$ .

- ▶ Examples:  $\mathfrak{m}$ ,  $\mathfrak{c}$ ,  $\mathfrak{c}_R(S)$  for any finite birational extension  $S$ .
- ▶ In general trace ideals need not be reflexive.
- ▶  $\mathfrak{m}$  is always reflexive but even  $\mathfrak{m}^2$  need not be reflexive.
- ▶ All large powers of  $\mathfrak{m}$  are not necessarily reflexive.

- ▶ More results in the case of **Almost Gorenstein rings** ( $\mathfrak{m}$  is  $\omega_R$ -Ulrich). For example in such rings all powers of trace ideals are reflexive.

### Definition 27

### Question 28 (Faber)

Let  $R$  be a complete local or graded ring. Are the following equivalent?

- 1  $CM(R)$  is of finite type.
- 2 There are only finitely many possibilities for  $\text{tr}(M)$ , where  $M \in CM(R)$ .

▶ Let  $R = k[[t^e, \dots, t^{2e-1}]]$  where  $k$  is infinite and  $e \geq 4$ . Then the set of trace ideals is finite but  $CM(R)$  is infinite.

### Question 29

Let  $R$  be a complete Cohen Macaulay local ring of dimension one. Can we classify when  $R$  has finitely many trace ideals?

▶ We do this for up to three trace ideals when  $R$  contains a field.

### Question 28 (Faber)

Let  $R$  be a complete local or graded ring. Are the following equivalent?

- 1  $CM(R)$  is of finite type.
- 2 There are only finitely many possibilities for  $tr(M)$ , where  $M \in CM(R)$ .

▶ Let  $R = k[[t^e, \dots, t^{2e-1}]]$  where  $k$  is infinite and  $e \geq 4$ . Then the set of trace ideals is finite but  $CM(R)$  is infinite.

### Question 29

Let  $R$  be a complete Cohen Macaulay local ring of dimension one. Can we classify when  $R$  has finitely many trace ideals?

▶ We do this for up to three trace ideals when  $R$  contains a field.

### Question 28 (Faber)

Let  $R$  be a complete local or graded ring. Are the following equivalent?

- 1  $CM(R)$  is of finite type.
- 2 There are only finitely many possibilities for  $tr(M)$ , where  $M \in CM(R)$ .

► Let  $R = k[[t^e, \dots, t^{2e-1}]]$  where  $k$  is infinite and  $e \geq 4$ . Then the set of trace ideals is finite but  $CM(R)$  is infinite.

### Question 29

Let  $R$  be a complete Cohen Macaulay local ring of dimension one. Can we classify when  $R$  has finitely many trace ideals?

► We do this for up to three trace ideals when  $R$  contains a field.

### Question 28 (Faber)

Let  $R$  be a complete local or graded ring. Are the following equivalent?

- 1  $CM(R)$  is of finite type.
- 2 There are only finitely many possibilities for  $tr(M)$ , where  $M \in CM(R)$ .
